

Health Information System Overview

Name	Email	Contribution
Andrew Bocker	abrocke3@asu.edu	Developed the Discharge and Exit Module & Print Patient Module; tested the Doctor Module; contributed to the user-end documentation
Humberto Cerritos	hcerrito@asu.edu	Developed the Nurse Module; tested the Discharge and Exit Module & Print Patient Module; reviewed the user-end documentation
Patrick Sullivan	pbsulli1@asu.edu	Developed the Vitals Module & Meds Module; tested the Nurse Module; wrote the user-end documentation
Abdur-Rahman Syed	amsyed4@asu.edu	Team Lead; developed the Patient Module, Print Patient Module & Exit HIS Module; tested the Vitals Module & Meds Module; wrote the user-end documentation
Rafa Younis	ryounis2@asu.edu	Developed the Doctor Module; tested the Patient Module & Exit HIS Module; reviewed the user-end documentation

The Health Information System, or HIS, is a friendly interface designed to provide a better healthcare management system for doctors, patients, and nurses. Patients can log in with their user ID, allowing them to view their current medical expenses, vitals, and medicine. Doctors and nurses can view patients' details, add patients, add and update vitals, view medications, and print a patient's information. Doctors can also create doctors, view all patients, order lab tests, add and update medications, assign patients to doctors, and discharge patients in addition to all the actions a nurse can perform.

Below is a flowchart explaining the class diagram.

Future Improvements

While the Health Information System is very useful, there is some potential for improvement, such as:

1. Exporting the patient data in JSON format to make the patient information interchangeable between different hospitals.

2. Keeping a permanent data storage file, so that the data is saved even if the user exits the system.
3. Improving patient login security, such as adding usernames and passwords.

Bugs

While most bugs were addressed, the system would crash if the user attempts to discharge a patient or print the patient's information. However, the user is able successfully discharge a patient and print a patient's information in Jupyter Notebook

Navigation Tree

- Main Menu
 - Doctor Module
 - Login
 - Create Doctor
 - Create Patient
 - View All Patients
 - Order Lab Test
 - Add Vitals
 - Update Vitals
 - View Vitals
 - Add Medication
 - Update Medication
 - Delete Medication
 - Discharge Patient
 - Print Patient Information
 - Nurse Module
 - Login
 - Create Patient
 - View Patient Info
 - View Meds
 - View Vitals
 - Add Vitals
 - Update Vitals

- Print Patient Information
- Patient Module
 - Enter ID
 - View Expenses
 - View Medications
 - View Vitals
- Exit HIS
